* weekly deliveries = weekly production ± Δ stocks

(%) : representativity of the sample based on the total European 2023 production or on the country (or group of countries) 2023 production.

EUROPEAN SAMPLE • Year 2025 • weeks 1 to 04
updated every 4 weeks

► UTILISATION RATE * (in %)

* From the 1st January 2019 the series have been changed, consequently comparisons and calculation are only valid as of January 2019.

► PRODUCTION LEVEL (in index **)

** Basis 100 : production during the weeks 01 to 04 of 2019

NOTE 1 : The capacity is calculated per calendar year as follow :

- The production of the first four weeks of the considered calendar year
- This theoretical result is taken into account with 98% (considering maintenance stops, break or any other technical problems), to get a "real" capacity in tons / year.
- The capacity can be amended during the year if big changes occurred such as closure of plant, new capacities, long stoppages ...

NOTE 2 : The utilisation rate index is calculated as follow :

- $\left[\frac{\text{Production during the last 4 weeks}}{\text{cumulated capacities during 4 weeks}} \right] \times 100$.
